

## Assignment on PHP

1. Write a PHP script in which the client will send a number using text box. The server will accept the number and display the multiplication table for the received number.
2. Write a PHP script in which the client will send a number using text box. The server will accept the number and display the sum of the digits of the received number.
3. Write a PHP script in which the client will send a number using text box. The server will accept the number and display whether the received number is even or odd.
4. Write a PHP script in which the client will send the Basic Salary, DA percentage and HRA percentage using text box. The server will display the Gross salary as per the information received from the client. (Calculate DA and HRA from Basic Salary as per the percentage received from the client.)

Gross salary = Basic + DA + HRA.

5. Write a PHP script in which the client will send a number using text box. The server will accept the number and display whether the received number is prime or not.
6. Write a PHP script to design a calculator as given below. The server will receive the two numbers and the operation from the client and display the result as

Number-1 + Number-2 = Result
